 @glebmotin

Summary

Full-Stack Developer experienced in building, architecting, and scaling modern web applications. Specialized in server-side development (Node.js) and relational database design (PostgreSQL) seamlessly integrated with robust frontend frameworks (React, TypeScript). Proficient in end-to-end MVP development, application containerization via Docker, and advanced AI integration (GigaChat API) leveraging custom RAG architectures. Focused on delivering high-performance, autonomous, and business-driven software solutions.

Education

09/2022 – 06/2026
Kazan, Russia

Bachelor, *Kazan Federal University*
Applied Informatics

Skills

Backend & DB

- Node.js
- Express
- PostgreSQL
- REST API architecture
- SQL

Frontend:

- React.js
- TypeScript
- JavaScript (ES6+)
- Tailwind CSS
- Redux Toolkit
- Zustand
- Axios
- Vite
- HTML5/CSS3

DevOps & Tools

- Docker
- Docker Compose
- Git
- GitHub
- GitLab
- GitLab CI/CD

AI Integration

- GigaChat API
- RAG (Retrieval-Augmented Generation) architecture

Languages

English
B2 (Upper-Intermediate)

Russian
Native

German
A2 (Elementary / Basic)

Courses

2024 **Yandex Practicum,** *Yandex*

2023 **Frontend Developer,** *Айтилогия*

 Projects**Auto Parts E-Commerce Platform with AI Consultant (Diploma Project)**, *Full-stack developer*

- Architected and developed a comprehensive full-stack e-commerce MVP application completely from scratch.
- Built a solid server-side architecture using Node.js and designed a relational database in PostgreSQL to handle complex product catalogs and user sessions.
- Integrated GigaChat API and engineered a custom RAG structure to implement an autonomous, context-aware digital shop assistant.
- Developed backend parsing logic for vehicle VIN-code decoding to dynamically cross-reference specifications and fetch exact matching components from the database.
- Built the interactive frontend using React/TypeScript and fully containerized the entire application via Docker for isolated production deployment.

Stack: Node.js, PostgreSQL, GigaChat API, RAG, Docker, React, TypeScript, Git

Real Estate Platform — Triatrum.ru (Commercial Project) , *Full-stack / Frontend-developer*

- Responsible for the client-side infrastructure and its seamless end-to-end integration with the Go backend.
- Contributed to the system interaction architecture by designing efficient REST API communication workflows.
- Worked within a cross-functional agile engineering team, coordinated integration data flows during technical syncs, and managed the codebase via GitLab (Code Review, branching, merge requests).
- Maintained and supported automated deployment pipelines using GitLab CI/CD workflows.
- Providing continuous technical support and scaling for production-ready backend integrations.

Стек: React, JavaScript, Go (REST API), GitLab CI/CD, Docker

P2P Marketplace — ArendOK.ru (Commercial Project) , *Frontend / Full-stack developer*

- Engineered the scalable frontend architecture and interface core for a high-traffic marketplace using React and TypeScript based on Figma design system files.
- Maintained component structure with a strict focus on maintainability, modularity, and optimized page-load performance.
- Participated in team architectural planning to sync client-side states with shifting backend data structures.
- Actively handling technical support, refactoring legacy components, and aligning UI logic with updated backend requirements.

Stack: React, TypeScript, JavaScript, Tailwind CSS, CSS Modules, Figma, Git, GitLab
